# BIMx

BIMx for ArchiCAD
Now Available on Android

GRAPHISOFT BIMx is an innovative, interactive, BIM communication tool for architects, setting new standards for design communication and presentation in the AEC industry. BIMx turns iOS and Android devices into full-fledged interactive building model explorers. The integrated online model sharing community on Facebook, and the new, cloud-based Model Transfer site allow all stakeholders to upload, browse, and download interactive BIMx models from any part of the world to Windows, Macintosh, iOS, and Android computers.

BIMx TRIAL is now part of the ArchiCAD installation – give it a try!
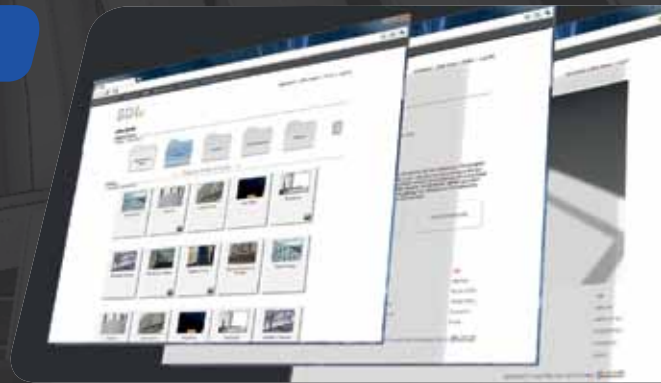

BIMx

BIMx Desktop Application

The GRAPHISOFT BIMx desktop application turns ArchiCAD BIM models into standalone interactive models with an embedded, game-like navigation environment in which anyone can explore the full BIM models without holding an ArchiCAD license. The BIMx model contains additional information about the BIM elements of the architectural model and allows the measurement of them as well. The BIMx desktop application can save offline files that architects can send directly to their clients or, alternatively, upload the models to the online BIMx community or to the private BIMx Model Transfer Site.

BIMx Open Community and Model Transfer Site

The integrated BIMx community on Facebook is the central hub for sharing interactive 3D building models. Architects holding a BIMx license can directly publish their models to this online community. Native Facebook functions such as comments, likes and share are extended with customized functions for filtering models. Upload/browse/download works without a Facebook account as well. The BIMx Model Transfer Site is a brand new cloud-service offered to BIMx users with an active ArchiCAD Software Service Agreement (SSA). Users are entitled to 1 GB free cloud storage space for each BIMx connected to an ArchiCAD license with SSA.

BIMx iOS & Android App

With the introduction of BIMx for the iPad/iPhone and Android devices, the reach of BIM's benefits extend well beyond building professionals to their clients, the building owners. BIMx features for these devices include real-time 3D navigation, stereo, shaded and hidden line views, fly-mode, gravity and egress recognition, and BIM element information display. Additional touchscreen-specific features make the navigation on these devices even easier, like the 'Tap to go through the door' or 'Tap to go there' features. Native Retina display support ensures that you can fully use the capabilities of the latest Apple mobile devices.

+ BIMx Model Transfer Service for Software Service Agreement Users **+** New Rendering Engine **+** License Borrowing
+ Pixel Lighting with SSAO* **+** Extended Element Info Data on Desktop, iOS, and Android **+** Full Unicode support **+** *Much more...*
