

GRAPHISOFT®

BIMx

for iPad & iPhone

BIMx FOR ARCHICAD 15

Now Available on iPad and iPhone

GRAPHISOFT BIMx is an innovative, interactive, BIM communication tool for architects setting new standards for design communication and presentation in the AEC industry. BIMx now turns the iPad/iPhone into a full-fledged interactive building model explorer device as well. The integrated online model sharing community on Facebook allows all stakeholders to upload, browse and download interactive BIMx models from any part of the world to Windows, Macintosh and iOS computers.

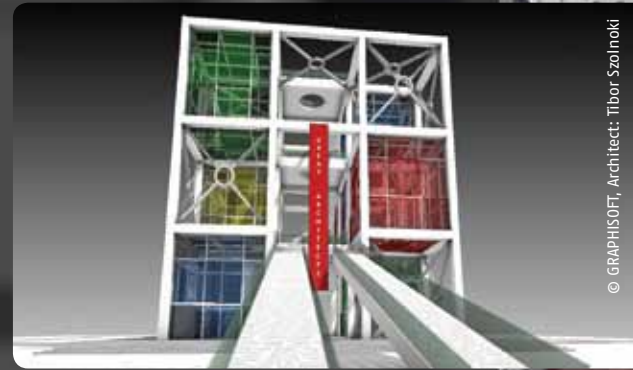

BIMx TRIAL is now part of the ArchiCAD 15 installation – give it a try!

BIMx

FOR ARCHICAD 15

+ BIMx Desktop Application

The GRAPHISOFT BIMx desktop application turns ArchiCAD BIM models into standalone interactive models with an embedded game-like navigation environment in which anyone can explore the full BIM models without holding an ArchiCAD license in which the building model was originally created. The BIMx desktop application can both save offline files that the architect can send directly to their clients and directly upload BIMx models to the online BIMx community.

+ BIMx iPad/iPhone App

With the introduction of BIMx for the iPad/iPhone, the reach of BIM's benefits goes well beyond building professionals to their clients, the building owners. The features of BIMx for iPad/iPhone are very similar to those of the desktop application, including real-time 3D navigation, stereo, shaded and hidden line views, fly-mode, gravity and egress recognition. Additional iPad/iPhone-specific features make the navigation on these devices even easier, like the 'Tap to go through the door' or 'Tap to go there' features.

+ BIMx Community on Facebook

The integrated BIMx community on Facebook is the central hub for sharing interactive 3D building models. Architects holding a BIMx license can directly publish their models to this online community. Uploaded BIMx models can be browsed in chronological order. Native Facebook functions such as comments, likes and share are extended with customized functions for filtering models. Not a Facebook fan? You can still upload/browse and download models from the community site!

- + 4 different rendering engines
- + Egress recognition
- + Gravity feature and fly-mode
- + iPad & iPhone enabled

- + Individual building element information*
- + Distance measuring*
- + Pre-saved walkthroughs*
- + Much more...
